

UNL Extension has developed a timely new web resource for Nebraska beef producers. Recent dry weather and unprecedented heat has strained the ability of beef cattle to cope with this year's environment. The Animal Science Department at UNL has responded.

A new web site is available to beef producers to answer questions and make management suggestions to improve the ability of cattle to cope with the heat. The web site is part of the Beef Team's effort to meet Nebraska beef producer's information needs. It is located at:  
<http://beef.unl.edu/web/cattleproduction/drought>.
